

The CCAFEE Doctrine

The six-pillar framework for sovereign climate wealth — Climate Metrics, Carbon Finance, AI/Tech MRV, Food Security, Environment, Education.

Sovereign Positioning

AfriQuest does not broker, sell, or trade carbon. We architect the conditions under which climate impact becomes sovereign wealth — verified at source, denominated in dignity, and delivered without debt.

A nation that owns the verification of its own carbon owns the financing of its own future. Every CCAFEE instrument is engineered to satisfy that single test.

The Six Pillars

1. Climate / Carbon Metrics — precise quantification of carbon reduction, avoidance, and sequestration under globally recognized methodologies.
2. Carbon Finance — capital structures that bridge climate impact to sovereign wealth, underpinned by the \$72,450 foundational provision.
3. AI / Tech MRV — defensible, audit-grade evidence via the dMRV-30 pipeline (satellite, IoT, immutable ledger).
4. Food Security — co-benefit accounting for yield improvements, soil health, and agricultural resilience.
5. Environment / Biodiversity — net-positive ecosystem, water, and species outcomes.
6. Education / Certification — capacity-building via the Competency Academy and Sovereign Certifications.

Sovereign Tiers

Sovereign Scout — entry-tier engagement for host nations and project sponsors: case-study intake, archetype mapping, pre-dMRV scoping.

Sovereign Partner — full-spectrum engagement: dMRV-30 deployment, WAR-graded issuance, SIP structuring, and direct infrastructure delivery oversight under host-nation authority.
